# CSC 155: Assignment 1

Author: Tan Dao

Screenshot:

How to run from command line: Unzip the submitted folder, and go into the "src" folder. Copy the file path from this directory. Open the command line and change the directory using the path you just copied. The following 2 commands will compile and run the program:

javac a1/*.java

java –Dsun.java2d.d3d=false a1.Starter

If this doesn't work, included directly within the src folder are 2 batch files that can also compile and run the program.
